Marketing in a Changing World

Marketing is more than simply advertising or selling a product; it involves developing and managing a product that will satisfy customer needs. It focuses on making the product available in the right place and at a price acceptable to buyers. It also requires communicating information that helps customers determine if the product will satisfy their needs. These activities are planned, organized, implemented, and controlled to meet the needs of customers within the target market. Marketers refer to these activities—product, pricing, distribution, and promotion—as the marketing mix because they decide what type of each element to use and in what amounts. A primary goal of a marketing manager is to create and maintain the right mix of these elements to satisfy customers’ needs for a general product type. Note in Figure 1.1 that the marketing mix is built around the customer.

Marketing managers strive to develop a marketing mix that matches the needs of customers in the target market. The marketing mix for Nissan Rogue, for example, combines a crossover SUV with coordinated distribution, promotion, and price appropriate for the target market of primarily men and women in their 20s and early 30s. The marketing mix for the rogue includes an economical engine, stylish design, and performance handling; a price around $20,000; as well as product placement and advertising during the hit show “Heroes” and a 5-car giveaway.

Before marketers can develop a marketing mix, they must collect in-depth, up-to-date information about customer needs. Such information might include data about the age, income, ethnicity, gender, and educational level of people in the target market, their preferences for product features, their attitudes toward competitors’ products, and the frequency with which they use the product. Research by Procter & Gamble, for example, introduced Old Spice High Endurance Hair & Body Wash after hours of videotaping men in the shower (in swimsuits) revealed that many men were already using body wash to shampoo their hair. Armed with market information, marketing managers are better able to develop a marketing mix that satisfies a specific target market.

Let’s look more closely at the decisions and activities related to each marketing mix variable.

Product Variable

Successful marketing efforts result in products that become part of everyday life. Consider the satisfaction customers have had over the years from Coca-Cola, Levi’s jeans, Visa credit cards, Tylenol pain relievers, and 3M Post-it Notes. The product variable also involves creating or modifying brand names and packaging. The product variable may also involve creating or modifying brand names and packaging. The product variable may also involve creating or modifying brand names and packaging.
of the world’s best basketball players is a global brand. Yao Ming, the Houston Rockets’ center, has endorsed products from McDonald’s, PepsiCo, and Reebok, many of which are marketed in his Chinese homeland.4

**Keeping Pace with the Challenges and the Changing World**

Product variable decisions and related activities are important because they are directly involved with creating products that address customers’ needs and wants. To maintain an assortment of products that helps an organization achieve its recession, marketers must develop new products, modify existing ones, and eliminate those that no longer satisfy enough buyers or that yield unacceptable profits. In the funeral home industry, for example, some companies have developed new products such as DVD memoirs, grave markers that depression photos along with a soundtrack.

**Features of the Book**

On the other hand, some luxury goods marketers are now offering lower-priced versions of their products to appeal to middle-class consumers who want to “trade up” to prestigious brand names.

**Overarching Content Changes**

Handbag maker Coach, for example, markets fabric wristlets for as low as $48, with high-end leather handbags selling for as much as $6,000.8 We explore pricing decisions in Chapters 11 and 12.

- **Extensive Reorganization.** The price variable relates to decisions and actions associated with establishing pricing objectives and policies and determining product prices. Price is a critical component of the marketing mix because customers are concerned about the value obtained in an exchange. Price is often used as a competitive tool, and intense price competition sometimes leads to recovery wars. High prices can be used competitively to establish a product’s premium image. Waterman and Mont Blanc pens, for example, have an image of high quality and high price that has given them significant status.

- **Theme-related coverage.** To satisfy customers, products must be available at the right time and in convenient locations.
  - Quick Reference Guide
  - Purpose Statement
  - Integrated Lecture Outline with features and multimedia (e.g. PowerPoint callouts incorporated)
  - Discussion Starter recommendations that encourage active exploration of the in-text examples.

- **Opening Vignettes.** Six thousand of these are placed in non-traditional locations, such as churches.9 In dealing with the distribution variable, a marketing manager makes products available in the quantities desired to as many target-market customers as income.

- **New Research.** A marketing manager also may select and motivate intermediaries (wholesalers and retailers), establish and maintain inventory control procedures, and develop and manage transportation and storage systems to maintain inventory control procedures.

Companies now can make their disposable income available throughout the world without maintaining facilities in each country. Apple has benefitted from technological advances in distributing songs over the Internet via its iTunes store, rather than establishing brick and mortar venues to sell music. It has sold more than 6 billion songs since the iTunes Store was launched in 2003. Users of the Apple iPhone can even download songs from the iTunes Store via their cellular networks, rather than having to find a computer with Internet access.10 We examine distribution issues in Chapters 13 and 14.

**Promotion Variable** The promotion variable relates to activities used to inform individuals or groups about the organization and its products. Promotion can aim to increase public awareness of the organization and of new or existing products. Del Monte Foods, for example, used humorous television commercials, a traveling bus tour, and a website (SmoochablePooch.com) to advertise and promote its Kibbles ’n Bits Brushing Bites dog food.11 Promotional activities also can educate customers about products. Its FlyPhone cellular phone at 13 – 17-year-olds who want a phone that can take photos, play MP3 tunes, play games, and share photos with friends. Other companies target multiple markets with different products, promotion, prices, and distribution systems for each one. Nike uses this strategy, marketing different types of shoes and apparel to appeal to specific needs of cross-trainers, basketball players, aerobic enthusiasts, and other athletic-shoe buyers. Nike has even developed an athletic shoe for a single ethnicity—the Air Native N7 for American Indians.12

**Understanding the Marketing Concept**

Marketing is more than simply advertising or selling a product; it involves developing and managing a product that will satisfy customer needs. It focuses on making the product available in the right place and at a price acceptable to buyers. It also requires communicating information that helps customers determine if the product will satisfy their needs. These activities are planned, organized, implemented, and controlled to meet the needs of customers within the target market. Marketers refer to these activities—product, pricing, distribution, and promotion—as the marketing mix because they decide what type of each element to use and in what amounts. A primary goal of a marketing manager is to create and maintain the right mix of these elements to satisfy customers’ needs for a general product type. Note in Figure 1.1 that the marketing mix is built around the customer.

Marketing managers strive to develop a marketing mix that matches the needs of customers in the target market. The marketing mix for Nissan Rogue, for example, combines a crossover SUV with coordinated distribution, promotion, and price appropriate for the target market of primarily men and women in their 20s and early 30s. The marketing mix for the rogue includes an economical engine, stylish design, and performance handling; a price around $20,000; as well as product placement and advertising during the hit show “Heroes” and a 5-car giveaway.13

**Marketing Deals with Products, Price, Distribution, and Promotion**

Product variable decisions and related activities are important because they are directly involved with creating products that address customers’ needs and wants. To maintain an assortment of products that helps an organization achieve its recession, marketers must develop new products, modify existing ones, and eliminate those that no longer satisfy enough buyers or that yield unacceptable profits. In the funeral home industry, for example, some companies have developed new products such as DVD memoirs, grave markers that depression photos along with a soundtrack, and caskets with drawers to hold mementos from the bereaved. To appeal to the growing number of people who
prefer to be cremated, other firms are offering more cremation and memorial services. We consider such product issues and many more in Chapters 9 and 10. On the other hand, some luxury goods marketers are now offering lower-priced versions of their products to appeal to middle-class consumers who want to “trade up” to prestigious brand names. Handbag maker Coach, for example, markets fabric wristlets for as low as $48, with high-end leather handbags selling for as much as $6,000. We explore pricing decisions in Chapters 11 and 12.

Distribution Variable To satisfy customers, products must be available at the right time and in convenient locations. Subway, for example, locates not only in strip malls but also inside Wal-Marts, Home Depots, laundromats, churches, and hospitals, as well as inside a Goodwill store, a car dealership, and buying power. There are more than 30,000 Subways in 88 different countries, all of them franchises. Six thousand of these are placed in non-traditional locations, such as churches. In dealing with the distribution variable, a marketing manager makes products available in the quantities desired to as many target-market customers as income, keeping total inventory, transportation, and storage costs as low as possible. A marketing manager also may select and motivate intermediaries (wholesalers and retailers), establish and maintain inventory control procedures, and develop and manage transportation and storage systems. The advent of the Internet and electronic commerce also has dramatically influenced the distribution variable. Companies now can make their disposable income available throughout the world without maintaining facilities in each country. Apple has benefitted from technological advances in distributing songs over the Internet via its iTunes store, rather than establishing brick and mortar venues to sell music. It has sold more than 6 billion songs since the iTunes Store was launched in 2003. Users of the Apple iPhone can even download songs from the iTunes Store via their cellular networks, rather than having to find a computer with Internet access. We examine distribution issues in Chapters 13 and 14.

Promotion Variable The promotion variable relates to activities used to inform individuals or groups about the organization and its products. Promotion can aim to increase public awareness of the organization and of new or existing products. Del Monte Foods, for example, used humorous television commercials, a traveling bus tour, and a website (SmoochablePooch.com) to advertise and promote its Kibbles ‘n Bits Brushing Bites dog food. Promotional activities also can educate customers about product

PART 1
Marketing Strategy and Customer Relationships

PART 1 introduces the field of marketing and offers a broad perspective from which to explore and analyze various components of the marketing discipline. CHAPTER 1 defines marketing and explores some key concepts, including customers and target markets, the marketing mix, relationship marketing, the marketing concept, and value. CHAPTER 2 provides an overview of strategic marketing issues, such as the effect of organizational resources and opportunities on the planning process; the role of the mission statement; corporate, business-unit, and marketing strategies; and the creation of the marketing plan. These issues are profoundly affected by competitive, economic, political, legal and regulatory, technological, and sociocultural forces in the marketing environment. CHAPTER 3 deals with these environmental forces and with the role of social responsibility and ethics in marketing decisions.

Red Sox Marketers Develop Alliance with Professional Bull Riding Circuit (WC 299)

PBR is certainly different from other partnerships FSG has made over the years, which were more affiliated with East Coast organizations and baseball. A bull rider must stay on top of a bucking 2,000 pound angry bull for 8 seconds. The ordeal is dangerous, but the winning rider can earn $10 million in prize money.

PBR is no stranger to marketing with other brands. Its $24 million dollar sponsorship revenue comes from such corporate sponsors as Copenhagen, Wrangler, and Enterprise Rent-A-Car. “PBR has a talented team that has done a good job cultivating relationships with a few blue-chip companies, but they are underdeveloped from a corporate-sponsorship perspective,” said FSG executive vice president Brian Corcoran, who looks forward to the additional corporate sponsorships their expertise can obtain.

The partnership between FSG and PBR comes at a time when other large companies are cutting their sports-related spending. However, FSG and PBR are hopeful that their strategic partnership will not only diversify the sports industry, but result in profitable relationships with other high-end brands and promote the sport of bull riding across the world.1

CHAPTER 6
Target Markets: Segmentation, Evaluation and Positioning

OBJECTIVES
1. Define marketing
2. Understand several important marketing terms, including target market, marketing mix, marketing exchanges, and marketing environment
3. Be aware of the marketing concept and marketing orientation
4. Understand the importance of building customer relationships
5. Explain the major marketing functions that are part of the marketing management process
6. Understand the role of marketing in our society
7. To understand co-branding and brand licensing
8. To describe the major packaging functions and design considerations and how packaging is used in marketing strategies
9. To examine the functions of labeling and describes some legal issues pertaining to labeling
Red Sox Marketers Develop Alliance with Professional Bull Riding Circuit (WC 299)

Chapter 16
Integrated Marketing Communications

Objectives
1. Define marketing
2. Understand several important marketing terms, including target market, marketing mix, marketing exchanges, and marketing environment
3. Be aware of the marketing concept and marketing orientation
4. Understand the importance of building customer relationships
5. Explain the major marketing functions that are part of the marketing management process
6. Understand the role of marketing in our society
7. To understand co-branding and brand licensing
8. To describe the major packaging functions and design considerations and how packaging is used in marketing strategies
9. To examine the functions of labeling and describes some legal issues pertaining to labeling

Chapter 2: Planning, Implementing, and Controlling Marketing Strategies

Understanding the Marketing Concept

Marketing is more than simply advertising or selling a product; it involves developing and managing a product that will satisfy customer needs. It focuses on making the product available in the right place and at a price acceptable to both buyers and sellers. It also requires communicating information that helps customers determine if the product will satisfy their needs. These activities are planned, organized, implemented, and controlled to meet the needs of customers within the target market. Marketers refer to these activities—product, pricing, distribution, and promotion—as the marketing mix because they decide the type of each element to use and in what amounts. A primary goal of a marketing manager is to create and maintain the right mix of these elements to satisfy customers’ needs for a general product type. Note in Figure 1.1 that the marketing mix is built around the customer.

Marketing managers strive to develop a marketing mix that matches the needs of customers in the target market. The marketing mix for Nissan Rogue, for example, combines a crossover SUV with coordinated distribution, promotion, and price. Other companies use mix for the rogue includes an economical engine, stylish design, and performance handling; a price around $20,000, as well as product advertising and advertising during the hit show “Heroes” and a 3-car giveaway.

Before marketers can develop a marketing mix, they must collect in-depth, up-to-date information about customer needs. Such information might include data about the age, income, ethnicity, gender, and educational level of people in the target market, their preferences for product features, their attitudes toward competitors’ products, and the frequency with which they use the product. Research by Procter & Gamble, for example, introduced Old Spice High Endurance Hair & Body Wash after hours of video placement and advertising revealing that many men were already using body wash to shampoo their hair.

Fly-Phone cellular phone at 13 – 17-year-olds who want a phone that can take photos, play MP3 tunes, games, and share photos with friends. Other companies target multiple markets with different products, promotion, and distribution systems for each one. Nike uses this strategy, marketing different types of shoes and apparel to meet specific needs of cross-trainers, basketball players, soccer enthusiasts, and repair athletic-shoe buyers. Nike has even developed an athletic shoe for a single ethnicity—the Air Native N7 for American Indians.

Marketing Deals with Products, Price, Distribution, and Promotion

Product variable decisions and related activities are important because they are directly involved with creating products that address customers’ needs and wants. To maintain an inventory of products that helps an organization achieve its recession, marketers must develop new products, modify existing ones, and eliminate those that no longer satisfy enough buyers or that yield unacceptable profits. In the funeral home industry, for example, some companies have developed new products such as DVD memoirs, grave markers that depress photos along with a soundtrack, and caskets with drawers to hold mementos from the bereaved. To appeal to the growing number of people who prefer to be cremated, other firms are offering more cremation and memorial services.

MARKETING OCCURS IN A DYNAMIC ENVIRONMENT

On the other hand, some luxury goods marketers are now offering lower-priced versions of their products to appeal to middle-class consumers who want to “trade up” to prestigious brand names. Handbag maker Coach, for example, markets fabric wristlets for as low as $48, with high-end leather handbags selling for as much as $6,000. We explore pricing decisions in Chapters 11 and 12.

Price Variable

The price variable relates to decisions and actions associated with establishing pricing objectives and policies and determining product prices. Price is a critical component of the marketing mix because customers are concerned about the value obtained in an exchange. Price is often used as a competitive tool, and intense price competition sometimes leads to recovery wars. High prices can be used competitively to establish a product’s premium image. Waterman and Mont Blanc pens, for example, have an image of high quality and high price that has given them significant status.

Distribution Variable

To satisfy customers, products must be available at the right time and in convenient locations. One or more of these objectives are central to all of the thousands of these places are located in non-traditional locations, such as churches. In dealing with the distribution variable, a marketing manager makes products available in the quantities desired to as many target-market customers as possible, keeping total inventories, transportation, and storage costs as low as possible. A marketing manager also may select and motivate intermediaries (wholesalers and retailers), establish and maintain

improve their relationship. Other marketers of ideas include political parties, churches, and schools.

The product variable also involves creating or modifying brand names and packaging and prosperity may include depression or optimism, or that prosperity for buying power. Resources, such as money, goods, and services that can be traded in an exchange.

Entrepreneurial Marketing

Efficiency and Size Make Tiny Cars a Winning Segment

With environmental concerns increasing, the automobile market has seen a global decline in sales and people are looking for smarter solutions to transportation. One answer appears to be, go tiny. While global car sales have been declining, the MINI Cooper (made by BMW) and smart cars (smart is a member of Mercedes-Benz Cars) are two bright spots on the car industry horizon. The smart car is like no other car on the American market, measuring in at around 106 inches long, it is three feet shorter than the MINI Cooper. Despite its small size, test drivers have found the interior to be roomier than expected.

Over 770,000 of the original smart fortwo coupes have been sold in 24 countries since 2001 and the current smart models are doing well in the United States—it is the first car that can be factory ordered over the internet. Toyota’s answer to the tiny car is called the iQ, which will first launch in small-car-friendly Japan and Europe, with sales expected to be 2,500 and 6,000 a month, respectively. Plans are to eventually sell the car in the U.S. as well. Part of the success of small cars is that they appeal to the practical and emotional sides of consumers. Fuel efficiencies are higher. The smart fortwo coupe gets 40 mpg highway; the MINI Cooper gets 37 mpg and the IQ is Toyota’s most fuel-efficient vehicle at 44 mpg highway. The fortwo has also earned the Ultra Low Emission designation from the Air Resources Board of California, due to its low exhaust emissions. Increased parking options is another perk of the small car, especially in crowded cities where parking is a challenge. The cars also aim to be more affordable than their large counterparts with the Smart priced from $11,590 to $16,590; the IQ is set to sell for $13,720, and the MINI Cooper at the higher end at $18,20,000. Buying tiny may very well display a high level of intelligence. Above: the Air Native N7 for American Indians. 3

Chapter 2: Planning, Implementing, and Controlling Marketing Strategies
Before marketers can develop a marketing mix, they must collect in-depth, up-to-date information about customer needs. Such information might include data about the age, income, ethnicity, gender, and educational level of people in the target market, their preferences for product features, their attitudes toward competitors’ products, and the frequency with which they use the product. For example, Procter & Gamble recently introduced Old Spice High Endurance Hair & Body Wash after hours of videotaping men in the shower (in swimsuits) revealed that many men were already using body wash to shampoo their hair! Armed with market information, marketing managers are better able to develop a marketing mix that satisfies a specific target market.

Let’s look more closely at the decisions and activities related to each marketing mix variable.

Product Variable
Successful marketing efforts result in products that become part of everybody’s life. Consider the satisfaction customers have had over the years from Coca-Cola, Levi’s, Visa credit cards, TYLENOL pain relievers, and 3M Post-it Notes. The product variable of the marketing mix deals with researching customers’ needs and wants and designing a product that satisfies them. A product can be a good, a service, or an idea. A good is a physical entity that you can touch. The MiniCooper car, iPhone phone, a bar of Ivory soap, or a kitten at an animal shelter are all examples of goods. A service is the application of human and mechanical efforts to objects or people to provide intangible benefits to customers. Air travel, dry cleaning, and medical care, and day care are examples of services. Ideas include concepts, philosophies, images, and issues. For instance, a marriage counselor, for a fee, gives spouses ideas to help

The product variable also involves creating or modifying brand names and packaging and prosperity may include decisions regarding warranty and repair services. Even one of the world’s best basketball players is a global brand. Yao Ming, the Houston Rockets’ center, has endorsed products from McDonald’s, PepsiCo, and Reebok, many of which are marketed in his Chinese homeland.

Price Variable
The price variable relates to decisions and actions associated with establishing pricing objectives and policies and determining product prices. Price is a critical component of the marketing mix because customers are concerned about the value obtained in an exchange. Price is often used as a competitive tool, and intense price competition sometimes leads to recovery wars. High prices can be used competitively to establish a product’s premium image. Waterman and Mont Blanc pens, for example, have an image of high quality and high price that has given them significant status. On the other hand, some luxury goods marketers are now offering lower-priced versions of their
features or urge people to take a particular stance on a political or social issue, such as smoking or drug abuse. For example, rising fuel prices prompted the U.S. Department of Energy to launch an advertising campaign featuring an Energy Hog mascot to urge the public to conserve energy, especially with regard to home heating. The campaign also used booklets, temporary tattoos for children, and two websites—one for children with games and one for adults with information about energy-saving tips and appliances.12 Promotion can help to sustain interest in established products that have been available for decades, such as Arm & Hammer baking soda or Ivory soap. Many companies are using the Internet to communicate information about themselves and their products. Ragu’s website, for example, offers Italian phrases, recipes, and a sweepstakes, whereas Southwest Airlines’ website enables customers to make flight reservations. In Chapters 15 through 17 we take a detailed look at promotion activities.

The marketing-mix variables are often viewed as controllable because they can be modified. However, there are limits to how much marketing managers can alter them. Economic conditions, competitive structure, and government regulations may prevent a manager from adjusting prices frequently or significantly. Making changes in the size, shape, and design of most tangible goods is expensive; therefore, such product features cannot be altered very often. In addition, promotional campaigns and methods used to distribute products ordinarily cannot be rewritten or revamped overnight.

**Understanding the Marketing Concept**

Individuals and organizations engage in marketing to facilitate exchanges, the provision or transfer of goods, services, or ideas in return for something of value. Any product (good, service, or even idea) may be involved in a marketing exchange. We assume only that individuals and organizations expect to gain a reward in excess of the costs incurred.

For an exchange to take place, four conditions must exist.

1. First, two or more individuals, groups, or organizations must participate, and each must possess something of value that the other party desires.
2. Second, the exchange should provide a benefit or satisfaction to both parties involved in the transaction.
3. Third, each party must have confidence in the promise of the “something of value” held by the other. If you go to a Coldplay concert, for example, you go with the expectation of a great performance.
4. Finally, to build trust, the parties to the exchange must meet expectations.

Figure 1.2 depicts the exchange process. The arrows indicate that the parties communicate that each has something of value available to exchange. An exchange will not necessarily take place just because these conditions exist; marketing activities can occur even without an actual transaction or sale. You may see an ad for a Sub-Zero refrigerator, for instance, but you might never buy the product. When an exchange occurs, products are traded for other products or for financial resources.

Marketing activities should attempt to create and maintain satisfying exchange relationships. To maintain an exchange relationship, buyers must be satisfied with the firm’s marketing mix. The forces of the marketing environment affect a marketer’s ability to facilitate exchanges in three general ways. First, they influence customers by affecting their lifestyles, standards of living, and preferences and needs for products. Because a marketing manager tries to develop and adjust the marketing mix to satisfy customers, effects of environmental forces on customers also have an indirect impact on marketing-mix components. For example, revamping its menu to include healthier characters only to promote products that meet health guidelines.11

Likewise, Dunkin’ Donuts likewise eliminated trans fats from all items on its menu.14 Second, marketing environment forces help to determine whether and how a marketing manager can perform certain marketing activities. Third, environmental forces may affect a marketing manager’s decisions and actions by influencing buyers’ reactions to the firm’s marketing mix.

**Marketing Occurs in a Dynamic Environment**

Marketing activities do not take place in a vacuum. The marketing environment, which includes competitive, economic, political, legal and regulatory, technological, and sociocultural forces, surrounds the customer and affects the marketing mix (see Figure 1.1). The effects of these forces on buyers and sellers can be dramatic and difficult to predict. They can create threats to marketers but also can generate opportunities for new products and new methods of reaching customers.
than vinyl records, turntable manufacturers had an opportunity to develop new products to satisfy customers’ needs for home entertainment. Companies that did not pursue this opportunity, such as Dual and Empire, are no longer in business.

Such organizations have failed to implement the marketing concept. Likewise, the growing popularity of MP3 technology has enabled firms such as Apple Computer to develop products like the iPod to satisfy consumers’ desire to store customized music libraries. Instead of buying CDs, a consumer can download a song for 99 cents from Apple’s iTunes online music store to develop products like the iPod.

According to the marketing concept, an organization should try to provide products that satisfy customers’ needs through a coordinated set of activities that also allows the organization to achieve its goals. Customer satisfaction is the major focus of the marketing concept.

To implement the marketing concept, an organization strives to determine what buyers want and uses this information to develop satisfying products. It focuses on customer analysis, competitor analysis, and integration of the firm’s resources to provide customer value and satisfaction, as well as generate long-term profits.17

The firm also must continue to alter, adapt, and develop products to keep pace with customers’ changing desires and preferences.

Ben & Jerry’s Homemade Ice Cream, for example, constantly assesses customer demand for ice cream and sorbet. On its website it maintains a “flavor graveyard” listing combinations that were tried and ultimately failed. It also notes its top ten flavors each month. Pharmaceutical companies such as Merck and Pfizer continually strive to develop new products to fight infectious diseases, viruses, cancer, and other medical problems. Drugs that lower cholesterol, control diabetes, alleviate depression, or improve the

Evolution of the Marketing Concept

The marketing concept may seem like an obvious approach to running a business. However, businesses have not always believed that the best way to make sales and profits is to satisfy customers (see Figure 1.1).

The Production Orientation

During the second half of the nineteenth century, the Industrial Revolution was in full swing in the United States. Electricity, rail transportation, division of labor, assembly lines, and mass production made it possible to produce goods more efficiently. With new technology and new ways of using labor, products poured into the marketplace, where demand for manufactured goods was strong.

The Sales Orientation

In the 1920s, strong demand for products subsided, and businesses realized that they would have to “sell” products to buyers. From the mid-1920s to the early 1950s, businesses viewed sales as the major means of increasing profits, and this period came to have a sales orientation. Businesspeople believed that the most important marketing activities were personal selling, advertising, and distribution. Today, some people incorrectly equate marketing with a sales orientation.
A customer’s lifetime value results from his or her frequency of purchases, average

recovery A stage of the business cycle in which the economy moves from recession or depression towards prosperity
income For an individual, the amount of money received through wages, rents, investments, pensions, and subsidy payments for a given period
disposable income After-tax income
Implementing the marketing concept means optimizing the exchange relationship, which is the relationship between a company’s financial investment in customer relationships and the return generated by customers responding to that investment.44
Maintaining positive relationships with customers is an important goal for marketers. The term relationship marketing refers to “long-term, mutually beneficial arrangements in which both the buyer and seller focus on value enhancement through the creation of more satisfying exchanges.”43
To build these long-term customer relationships, marketers are increasingly turning to marketing research and information technology. Customer relationship management (CRM) focuses on using information about customers to create marketing strategies that develop and sustain desirable customer relationships. By increasing customer value over time, organizations try to retain and increase long-term profitability through customer loyalty.46 For example, Best Buy has a reward zone program, wherein members collect a reward point for every $1 spent in the store, which can be redeemed for gift certificates. Every 250 points earns customers a $5 reward certificate.47 Starbucks has also started a rewards program to lure its faithful customers to the chain more frequently. Loyalty cards and more frequent promotions are part of Starbucks’ strategy to counter sagging sales.48
Managing customer relationships requires identifying patterns of buying behavior and using that information to focus on the most promising and profitable customers. Companies must be sensitive to customers’ requirements and desires and establish communication to build their trust and loyalty. Consider that the lifetime value of a Lexus customer is about 50 times that of a Taco Bell customer, but remember, there are many more Taco Bell customers. For either organization, a customer is important. A customer’s lifetime value results from his or her frequency of purchases, average

Management must first establish an information system to discover customers’ real needs and then use the information to create satisfying products.
For example, research has shown that women want products that are customizable and relevant to their lives.
Kimberly-Clark’s Huggies brand, for example, has come out with a “Baby Countdown” widget for expectant mothers.
All they do is type in their due date and the Countdown tells them what is happening in their bodies and what to expect.46 As food prices increase, McDonald’s has been engaged in large scale tests to determine ways to cut costs on their $1 cheeseburgers. The company feels the pressure to keep prices low, while simultaneously satisfying customers.47 An information system is usually expensive; management must commit customary time for its development and maintenance. Without an adequate information system, however, an organization cannot be marketing oriented.
To satisfy customers’ objectives as well as its own, a company also must coordinate all its activities. To keep service quality high, cross training service employees to take on a variety of roles creates improved implementation of the marketing strategy.49 This may require restructuring the internal operations and overall objectives of one or more departments. Through the use of Internet-based marketing strategies (e-marketing), companies can personalize customer relationships on a nearly one-on-one basis.49

Achieving the full profit potential of each customer relationship should be the fundamental goal of every marketing strategy. Marketing relationships with customers are the lifeblood of all businesses. At the most basic level, profits can be obtained through relationships in the following ways: (1) by acquiring new customers, (2) by enhancing the profitability of existing customers, and (3) by extending the duration of customer relationships. In addition to retaining customers, companies also should

The Importance of Marketing in Our Global Economy

Our definition of marketing and discussion of marketing activities reveal some of the obvious reasons the study of marketing is relevant in today’s world. In this section we look at how marketing affects us as individuals and at its role in our increasingly global society.

Marketing Costs Consume a Sizable Portion of Buyers’ Dollars

Studying marketing will make you aware that many marketing activities are necessary to provide satisfying goods and services. Obviously, these activities cost money. About one-half of a buyer’s dollar goes for marketing costs, including promotion and distribution, as well as profit margins. The production (pressing) of the CD represents about $1, or 6 percent of its price. A family with a monthly income of $3,000 that allocates $600 to taxes and savings spends about $2,400 for goods and services. Of this amount, $1,200 goes for marketing activities. If marketing expenses consume that much of your dollar, you should know how this money is used.

Marketing Is Used in Nonprofit Organizations

Although the term marketing may bring to mind advertising for Burger King, Volkswagen, and Apple, marketing is also important in organizations working to achieve goals other than ordinary business objectives such as profit. Government agencies at the federal, state, and local level use marketing to provide up-to-date information about customer needs. Federal agencies use marketing to sell their products and services to the public. The U.S. Forest Service advertises its outdoor recreation areas, and the National Aeronautics and Space Administration (NASA) markets its space flights to tourists. The U.S. Department of Agriculture (USDA) markets agricultural products, and the Department of Energy’s Oak Ridge National Laboratory uses marketing to sell its scientific capabilities. The Department of Education markets federal student aid programs, and the National Park Service uses marketing to sell the national parks.

Sizable Portion of Buyers’ dollars

With environmental concerns increasing, the automobile market has seen a global decline in sales and people are looking for smarter solutions to transportation.

- While global car sales have been declining precipitously, the MINI Cooper (made by BMW) and smart cars are two bright spots on the car industry horizon.
- The smart car is like no other car on the American market, measuring in at around 106 inches long. It is three feet shorter than the MINI Cooper.
- Despite its small size, test drivers have found the interior to be roomier than expected.

Over 770,000 of the original smart fortwo coupes have been sold worldwide since 1999, and the current smart model is doing well in the United States.

1. It is the first car that can be factory ordered over the internet.
2. Toyota’s answer to the tiny car is called the iQ, which will first launch in smaller-car-friendly Japan and Europe.
3. With sales expected to be 2,500 and 6,000 a month, respectively. Plans are to eventually sell the car in the U.S.

Part of the success of smaller vehicles is that they appeal to the practical and emotional sides of consumers. Fuel efficiencies are higher: The smart fortwo coupe gets 40 mpg highway; the MINI Cooper gets 37 mpg; and the iQ is Toyota’s most fuel-efficient vehicle at 54 mpg highway. The fortwo has also earned the Ultra Low Emission designation from the Air Resources Board of California, due to its low exhaust emissions. Increased parking options is another perk of the small car, especially in crowded cities where parking is a challenge. The cars also aim to

Marketing Offers Many Exciting Career Prospects

From 25 to 33 percent of all civilian workers in the United States perform marketing activities. The marketing field offers a variety of interesting and challenging career opportunities throughout the world, such as personal selling, advertising, packaging, transportation, storage, marketing research, product development, wholesaling, and retailing. In addition, many individuals working for nonprofit organizations engage in marketing activities to promote political, educational, cultural, church, civic, and charitable activities. Whether a person earns a living through marketing activities or performs them voluntarily for a nonprofit group, marketing knowledge and skills are valuable personal and professional assets.

1. Define marketing

Marketing is the process of creating, pricing, distributing, and promoting goods, services, and ideas to facilitate satisfying exchange relationships with customers and to develop and maintain favorable relationships with stakeholders in a dynamic environment. The essence of marketing is to develop satisfying exchanges from which both customers and marketers benefit.

2. Color of box background will change from part to part and will match the Part color used behind the page numbers and on the part and chapter openers

A target market is the group of customers toward which a company directs a set of marketing efforts. The variables—product, price, distribution, and promotion—are known as the marketing mix because marketing managers decide what type of each element to use and in what amounts. Marketing managers strive to develop a marketing mix that matches the needs of customers in the target market. Before marketers can develop a marketing mix, they must collect in-depth, up-to-date information about customer needs.

Individuals and organizations engage in marketing to facilitate exchanges—the provision or transfer of goods, services, and ideas in return for something of value. Four conditions must exist for an exchange to occur: (1) Two or more individuals, groups, or organizations must participate, and each must possess something of value that the other party desires; (2) the exchange should provide a benefit or satisfaction to both parties involved in the transaction; (3) each party must have confidence in the promise of the “something of value” held by the other; and (4) to build trust, the parties to the exchange must meet expectations. Marketing activities should attempt to create and maintain satisfying exchange relationships with all stakeholders—those constituents who have a “stake,” or claim, in some aspect of a company’s products, operations, markets, industry, and outcomes.

The marketing environment, which includes competitive, economic, political, legal and regulatory, technological, and sociocultural forces, surrounds the customer and the marketing mix. These forces can create threats to marketers, but they also generate opportunities for new products and new methods of reaching customers.

3. Be aware of the marketing concept and marketing orientation

According to the marketing concept, an organization should try to provide products that satisfy customers’ needs through a coordinated set of activities that also allows the organization to achieve its goals. Customer satisfaction is the marketing concept’s major objective. The philosophy of the marketing concept emerged in the United States during the 1950s after the production and sales era. Organizations that develop activities consistent with the marketing concept become marketing-oriented organizations.

4. Understand the importance of building customer relationships

Relationship marketing involves establishing long-term, mutually satisfying buyer-seller relationships. Customer relationship management (CRM) focuses on using information about customers to create marketing strategies that develop and sustain desirable customer relationships. Managing customer relationships requires identifying patterns of buying behavior and using that information to focus on the most promising and profitable customers. Value is a customer’s subjective assessment of benefits relative to costs in determining the worth of a product. Benefits include anything a buyer receives in an exchange, whereas costs include anything a buyer must give up to obtain the benefits the product provides.
Part 2: Environmental Forces and Social and Ethical Responsibilities

4. Explain the major marketing functions that are part of the marketing management process

Marketing management is the process of planning, organizing, implementing, and controlling marketing activities to facilitate effective and efficient exchanges. Planning is a systematic process of assessing opportunities and resources, determining marketing objectives, developing a marketing strategy, and preparing for implementation and control. Organizing marketing activities involves developing the marketing unit’s internal structure. Proper implementation of marketing plans depends on coordinating marketing activities, motivating marketing personnel, and communicating effectively within the unit. The marketing control process consists of establishing performance standards, comparing actual performance with established standards, and reducing the difference between desired and actual performance.

5. Understand the role of marketing in our society

Marketing costs absorb about half of each buyer’s dollar. Marketing activities are performed in both business and nonprofit organizations. Marketing activities help business organizations to generate profits, and they help fuel the increasingly global economy. Knowledge of marketing is an essential tool for decision making in both businesses and nonprofit organizations.

discussion and review questions

1. What is marketing? How did you define the term before you read this chapter?
2. What is the focus of all marketing activities? Why?
3. What are the four variables of the marketing mix? Why are these elements known as variables?
4. What conditions must exist before a marketing exchange can occur? Describe a recent exchange in which you participated.
5. What are the forces in the marketing environment? How much control does a marketing manager have over these forces?
6. Discuss the basic elements of the marketing concept. Which businesses in your area use this philosophy?
7. How can an organization implement the marketing concept?
8. What is customer relationship management? Why is it so important to “manage” this relationship?
9. What is value? How can marketers use the marketing mix to enhance the perception of value?
10. What types of activities are involved in the marketing management process?
11. Why is marketing important in our society? Why should you study marketing?
12. What are the four variables of the marketing mix? Why are these elements known as variables?
13. Discuss the basic elements of the marketing concept. Which businesses in your area use this philosophy?
14. How can an organization implement the marketing concept?
15. What is important relationship management? Why is it so important to “manage” this relationship?
16. Discuss the basic elements of the marketing concept. Which businesses in your area use this philosophy?
17. What types of activities are involved in the marketing management process?
18. Why is marketing important in our society? Why should you study marketing?
19. What are the four variables of the marketing mix? Why are these elements known as variables?

application questions

1. Identify several businesses in your area that have not adopted the marketing concept. What characteristics of these organizations indicate nonacceptance of the marketing concept?
2. Identify possible target markets for the following products:
   a. Kellogg’s Corn Flakes
   b. Wilson tennis rackets
   c. Disney World
   d. Diet Pepsi

internet exercise

The American Marketing Association (AMA) is the marketing discipline’s primary professional organization. In addition to sponsoring academic research, publishing marketing literature, and organizing meetings of local businesspeople with student members, it helps individual members to find employment in member firms. Visit the AMA website at the following site to assist students in planning their careers and finding jobs.

**Green Mountain Coffee Roasters Brew Up the Best Strategies**

More than a century after the first Harley-Davidson motorcycle hit the road, the company dominates the U.S. motorcycle market. The company tumbled on the brink of bankruptcy in the 1980s and then rebounded with a renewed focus on product quality. Now, with annual worldwide sales of nearly $6 billion, Harley-Davidson is building a solid foundation for future profits by focusing on younger customers and on women.

According to the Motorcycle Industry Council, the average age of motorcyclists is 42. The average age of Harley-Davidson’s customers is 48, but its customers are intensely loyal to the iconic brand. If the company can bring in younger customers, especially first-time buyers, it has a good chance of keeping them as they trade up to more powerful and expensive motorcycles in the coming years.

As a result, Harley-Davidson is putting special targeting emphasis on consumers in their 20s and 40s. Newer models are increasing. The company still builds and sells more bikes, or ship their bikes for assembly and future.

**QUESTIONS FOR DISCUSSION**

1. What targeting strategy is Harley-Davidson using, and why is it appropriate?
2. Of the four categories of segmentation variables for consumer markets, which are being used by Harley-Davidson?
3. Why is it important for Harley-Davidson to monitor the marketing segmentation efforts of competitors like Yamaha and Suzuki?

**CASE 1.2**

**Pepsi Sales Bubble with Limited-Edition Soft Drinks**

When Travelocity began in 1996, it was one of the first Internet travel websites, offering airline and hotel reservations, cruises, vacation packages, and car rentals. Today, Travelocity offers consumers a choice of more than 70,000 hotels, 50 car rental companies, 6,000 travel packages, and flights on dozens of airlines worldwide.

Now that Travelocity faces intense competition from Expedia, Orbitz, and other travel websites, its marketers are making the company stand out by standing behind travelers every step of the way. The result is the unique four-point Travelocity Guarantee.

First, Travelocity guarantees its low price. If, within 24 hours, consumers find a lower price for travel they have booked through Travelocity, the company will refund the difference and add a credit toward future travel. Second, Travelocity allows customers to change passenger names, flight dates, and flight times without a fee if they make the change within 24 hours of booking their travel. Third, Travelocity will alert customers in advance to any issues that might negatively affect their travel arrangements and try to fix the problem by switching hotels or making other changes.

Fourth, if something goes wrong during a trip, Travelocity will work to put things right. For example, if a customer books a hotel with a swimming pool but finds that the swimming pool is closed on arrival, Travelocity will, at its own expense, move the customer to a comparable or better-quality hotel. Travelocity maintains a round-the-clock hotline to ensure that customers get what they want. The Travelocity Guarantee aligns the concerns of customers who may be worried about booking online.

The company has promoted the guarantee with a “Roaming Gnome Endorser of the Travelocity Guarantee” advertising campaign. The distinctive Roaming Gnome humanized the brand, embodied the joy of travel, and symbolized seeing the world with new eyes. The advertising campaign created a tremendous buzz about Travelocity and boosted revenues by 37 percent. Based on this customer reaction, Travelocity opened an online store to sell mugs, magnets, tote bags, and other items featuring the Roaming Gnome, who even has his own page on MySpace.com.

Over time, Travelocity has acquired a number of travel sites to broaden its offerings. When it purchased Site59, for example, Travelocity solidified its position as a major player in the last-minute travel business. Now customers who feel the urge to travel can get special deals by booking more than 14 days before they want to leave. The savings are even bigger when customers book a vacation package just a few days in advance.

Travelocity has seven testers clicking all over its website to determine what consumers might find confusing and how to make the site faster and more convenient. One lesson: Travelocity learned was that customers don’t always remember their passwords. To counteract this problem, Travelocity changed the system so that customers could reenter an address or e-mail address and use those details to access their personal profile rather than relying on a password. Thanks to this change, revenues quickly rose by 10 percent. Watch for more changes ahead as Travelocity finds new ways to satisfy its customers and new places for its Gnome to visit.

**QUESTIONS FOR DISCUSSION**

1. How does the Travelocity Guarantee give Travelocity a competitive advantage in various stages of the consumer buying decision process?
2. What is Travelocity doing to influence consumer perceptions of its brands and product offerings?
3. What are the major situational influences that affect Travelocity consumers’ buying decisions? Explain.
Chapter 2: Planning, Implementing, and Controlling Marketing Strategies

STRA TEGIC CASE 1

McDonald’s Marketing Serves Up Global and Local Profits

Introduction

More than a century after the first Harley-Davidson motorcycle hit the road, the company dominates the U.S. motorcycle market. The company tettered on the brink of bankruptcy in the 1980s and then roared back with a renewed focus on product quality. Now, with annual worldwide sales of nearly $6 billion, Harley-Davidson is building a solid foundation for future profits by focusing on younger customers and on women.

According to the Motorcycle Industry Council, the average age of motorcycle riders is 42. The average age of Harley-Davidson’s customers is 48, but its customers are intensely loyal to the iconic brand. If the company can bring in younger customers, especially first-time buyers, it has a good chance of keeping them as they trade up to more powerful and expensive motorcycles in the coming years.

As a result, Harley-Davidson is putting special targeting emphasis on consumers in their 20s and on women. Its newer models marry the brand’s image of freedom and individuality to motorcycles with styling, performance, and features that appeal to these two segments. To attract experienced riders trading up to better bikes, Harley-Davidson prices its motorcycles starting at $6,695 and offers financing and insurance, as well.

Although competitors, such as Yamaha and Suzuki, are targeting younger motorcyclists worldwide, Harley-Davidson sees its uniquely American brand and its reputation for quality as two major strengths. Knowing that members of its target market are passionate about motorcycles, the company offers tours of its factories in Wisconsin, Pennsylvania, and Missouri. It also set up the Harley-Davidson Museum in its headquarters city of Milwaukee, with 10,000 square feet of exhibits featuring Harley-Davidson products of the past, present, and future.

On the lifestyle side, the Harley Owners Group (HOG) fosters a sense of community among customers, both young and old, male and female. HOG’s more than a million members enjoy benefits such as access to dozens of exclusive group rides, a special customer service hotline, and subscriptions to motorcycling magazines. In addition, members can use the Harley-Davidson website to plan travel, book hotels, rent bikes, or ship their bikes for their next riding adventures.

Like a number of companies, global economic woes have been a challenge for Harley-Davidson. Sales of the most profitable models are declining, while sales of lower-profit models are increasing. The company still builds its most profitable models are declining, while sales of lower-profit models are increasing. The company still builds its most profitable models are declining, while sales of lower-profit models are increasing. The company still builds its most profitable models are declining, while sales of lower-profit models are increasing. The company still builds...
starting at $6,695 and offers financing and insurance, as well. However, Harley-Davidson selects annually only a small number of orders for custom-built bikes. Not surprisingly, these custom products are in high demand by all targeted segments, despite their higher price tags.

**Growth and Flexibility**

To encourage new riders to learn to safely ride a motorcycle and then perhaps buy a Harley-Davidson bike, many of the company’s dealers offer the Rider’s Edge driving course. In the past decade, thousands of consumers have graduated and earned a motorcycle license through this course. The Rider’s Edge also helps experienced riders to hone their riding skills and learn special techniques for riding in groups.

**Take Direct Action.** Although competitors, such as Yamaha and Suzuki, are targeting younger motorcyclists worldwide, Harley-Davidson sees its uniquely American brand and its reputation for quality as two major strengths.

**Consult Your Supervisor.** Knowing that members of its target market are passionate about motorcycles, the company offers tours of its factories in Wisconsin, Pennsylvania, and Missouri. It also set up the Harley-Davidson Museum in its headquarters city of Milwaukee, with 130,000 square feet of exhibits featuring Harley-Davidson products of the past, present, and future.

**Talk with Human Resources.** On the lifestyle side, the Harley Owners Group (HOG) fosters a sense of community among customers, both young and old, male and female. HOG’s more than a million members enjoy benefits such as access to dozens of exclusive group rides, a special customer service hotline, and subscriptions to motorcycling magazines. In addition, members can use the Harley-Davidson website to plan travel, book hotels, rent bikes, or ship their bikes for their next riding adventure.

Like a number of companies, global economic woes have been a real challenge for Harley-Davidson. Sales of the most profitable models are declining, while sales of low-profit models are increasing. The company still builds and sells more than 300,000 motorcycles each year, but its ability to grow profitably depends, in large part, on the success of its targeting strategy.

**QUESTIONS FOR DISCUSSION**

1. What targeting strategy is Harley-Davidson using, and why is it appropriate?
2. Of the four categories of segmentation variables for consumer markets, which are being used by Harley-Davidson?
3. Why is it important for Harley-Davidson to monitor the marketing segmentation efforts of competitors like Yamaha and Suzuki?

**Changes in the Workplace**

FlyPhone cellular phone at 13 – 17-year-olds who want a phone that can take photos, play MP3 tunes, play games, and share photos with friends. Other companies target multiple markets with different products, promotion, prices, and distribution systems for each one. Nike uses this strategy, marketing different types of shoes and apparel to meet specific needs of cross-trainers, basketball players, aerobic enthusiasts, and other athletic-shoe buyers. Nike has even developed an athletic shoe for a single ethnicity—the Air Native N7 for American Indians.

Marketing is more than simply advertising or selling a product; it involves developing and managing a product that will satisfy customer needs. It focuses on making the product available in the right place and at a price acceptable to buyers. It also requires communicating information that helps customers determine if the product will satisfy their needs. These activities are planned, organized, implemented, and controlled to meet the needs of customers within the target market. Marketers refer to these activities—product, pricing, distribution, and promotion—as the marketing mix because they decide what type of each element to use and in what amounts. A primary goal of a marketing manager is to create and maintain the right mix of these elements to satisfy customers’ needs for a general product type. Note in Figure 1.1 that the marketing mix is built around the customer.

Marketing managers strive to develop a marketing mix that matches the needs of customers in the target market. The marketing mix for Nissan Rogue, for example, combines a crossover SUV with coordinated distribution, promotion, and price appropriate for the target market of primarily men and women in their 20s and early 30s. The marketing mix for the rogue includes an economical engine, stylish design, and performance handling; a price around $20,000; as well as product placement and advertising during the hit show “Heroes” and a 5-car giveaway.

**Career Choices are Major Life Choices**

Before marketers can develop a marketing mix, they must collect in-depth, up-to-date information about customer needs. Such information might include data about the age, income, ethnicity, gender, and educational level of people in the target market, their preferences for product features, their attitudes toward competitors’ products, and the frequency with which they use the product. Research by Procter & Gamble, for example, introduced Old Spice High Endurance Hair & Body Wash after hours of videotaping men in the shower (in swimsuits) revealed that many men were already using body wash to shampoo their hair. Armed with market information, marketing managers are better able to develop a marketing mix that satisfies a specific target market.

Let’s look more closely at the decisions and activities related to each marketing mix variable. Product Variable Successful marketing efforts result in products that become part of everyday life. Consider the satisfaction customers have had over the years from Coca-Cola, Levi’s jeans, Visa credit cards, Tylenol pain relievers, and 3M Post-it Notes. The product variable of the marketing mix deals with researching customers’ needs and
improve their relationship. Other marketers of ideas include political parties, churches, and schools.

The product variable also involves creating or modifying brand names and packaging and prosperity may include decisions regarding warranty and repair services. Even one of the world’s best basketball players is a global brand. Yao Ming, the Houston Rockets’ center, has endorsed products from McDonald’s, PepsiCo, and Reebok, many of which are marketed in his Chinese homeland.6

**Personal Factors Influencing Career Choices**

Product variable decisions and related activities are important because they are directly involved with creating products that address customers’ needs and wants. To maintain an assortment of products that helps an organization achieve its recession, marketers must develop new products, modify existing ones, and eliminate those that no longer satisfy enough buyers or that yield unacceptable profits. In the funeral home industry, for example, some companies have developed new products such as DVD memoirs, grave markers that depression photos along with a soundtrack, and caskets with drawers to hold mementos from the bereaved. To appeal to the growing number of people who prefer to be cremated, other firms are offering more cremation and memorial services.

1. Figure 1.2 depicts the exchange process. The white districts indicate that the parties communicate that each has something of value available to exchange. An exchange will not necessarily take place just because these conditions exist; marketing activities can occur even without an actual transaction or sale.
2. You may see an ad for a Sub-Zero refrigerator, for instance, but you might never buy the product. When an exchange occurs, products are traded for other products or for financial resources.
3. Marketing activities should attempt to create and maintain satisfying exchange relationships. To maintain an exchange relationship, buyers must be satisfied with the good, service, or idea obtained, and sellers must be satisfied with the financial reward or something else of value received.
4. Marketers are concerned with building and maintaining relationships not only with customers but also with relevant stakeholders. Stakeholders include those constituents who have a “stake,” or claim, in some aspect of a company’s products, operations, markets, industry, and outcomes; these include customers, employees, investors, and shareholders.

**MARKETING OCCURS IN A DYNAMIC ENVIRONMENT**

On the other hand, some luxury goods marketers are now offering lower-priced versions of their products to appeal to middle-class consumers who want to “trade up” to prestigious brand names. Handbag maker Coach, for example, markets fabric wristlets and small leather goods for as low as $48, with high-end leather handbags selling for as much as $6,000.8 We will explore pricing decisions in Chapters 11 and 12.

**Price Variable**

The price variable relates to decisions and actions associated with establishing pricing objectives and policies and determining product prices. Price is a critical component of the marketing mix because customers are concerned about the value obtained in an exchange. Price is often used as a competitive tool, and intense price competition sometimes leads to recovery wars. High prices can be used competitively to establish a product’s premium image. Waterman and Mont Blanc pens, for example, have an image of high quality and high price that has given them significant status.

**Distribution Variable**

To satisfy customers, products must be available at the right time and in convenient locations. Subway, for example, locates not only in strip malls but also inside Wal-Mart, Home Depots, laundromats, churches, and hospitals, as well as inside a Goodwill store, a car dealership, and buying power. There are more than 30,000 Subways in 88 different countries, all of them franchises. Six thousand of these are placed in non-traditional locations, such as churches.9 In dealing with the distribution variable, a marketing manager makes products available in the quantities features or urge people to take a particular stance on a political or social issue, such as smoking or drug abuse. For example, rising fuel prices prompted the U.S. Department of Energy to launch an advertising campaign featuring an Energy Hog mascot to urge the public to conserve energy, especially with regard to home heating. The campaign also used booklets, temporary tattoos for children, and two websites—one for children and games and one for adults with information about energy-saving tips and appliances.12 Promotion can help to sustain interest in established products that have been available for decades, such as Arm & Hammer baking soda or Ivory soap. Many companies are using the Internet to communicate information about themselves and their products. Ragu’s website, for example, offers Italian phrases, recipes, and a sweepstakes, whereas Southwest Airlines’ website enables customers to make flight reservations. In Chapters 15 through 17 we take a detailed look at promotion activities.

The marketing-mix variables are often viewed as controllable because they can be modified. However, there are limits to how much marketing managers can alter them. Economic conditions, competitive structure, and government regulations may prevent a manager from adjusting prices frequently or significantly. Making changes in the size, shape, and design of most tangible goods is expensive; therefore, such product features cannot be altered very often. In addition, promotional campaigns and methods used to distribute products ordinarily cannot be rewritten or revamped overnight.

**Job Search Activities**

Individuals and organizations engage in marketing to facilitate exchanges, the provision or transfer of goods, services, or ideas in return for something of value. Any product (good, service, or even idea) may be involved in a marketing exchange. We assume only that individuals and organizations expect to gain a reward in excess of the costs incurred.

For an exchange to take place, four conditions must exist. First, two or more individuals, groups, or organizations must participate, and each must possess something of value that the other party desires. Second, the exchange should provide a benefit or satisfaction to both parties involved in the transaction. Third, each party must have confidence in the promise of “something of value” held by the other. If you go to a Coldplay concert, for example, you go with the expectation of a great performance. Finally, to build trust, the parties to the exchange must meet expectations.

Figure 1.2 depicts the exchange process. The arrows indicate that the parties communicate that each has something of value available to exchange. An exchange will not necessarily take place just because these conditions exist; marketing activities can occur even without an actual transaction or sale. You may see an ad for a Sub-Zero refrigerator, for instance, but you might never buy the product. When an exchange occurs, products are traded for other products or for financial resources.

Marketing activities should attempt to create and maintain satisfying exchange relationships. To maintain an exchange relationship, buyers must be satisfied with the good, service, or idea obtained, and sellers must be satisfied with the financial reward or something else of value received.

Marketers are concerned with building and maintaining relationships not only with customers but also with relevant stakeholders. Introduction

More than a century after the first Harley-Davidson motorcycle hit the road, the company dominates the U.S. motorcycle market. The company weathered the brink of bankruptcy in the 1980s and then rebounded with a renewed focus on product quality. Now, with annual worldwide sales of nearly $6 billion, Harley-Davidson is building a solid foundation for future profits by focusing on younger customers and on women.

According to the Motorcycle Industry Council, the average age of Harley-Davidson’s customers is 42. The average age of Harley-Davidson’s customers is 42, but its customers are intensely loyal to the iconic brand. If the company can bring in younger customers, especially first-time buyers, it has a good chance of keeping them as they trade up to more powerful and expensive motorcycles in the coming years.

As a result, Harley-Davidson is putting special targeting emphasis on consumers in their 20s and on women. Its newer models marry the brand’s image of freedom and individuality to motorcycles with styling, performance, and features that appeal to these two segments. To attract first-time buyers as well as experienced riders trading up to better bikes, Harley-Davidson prices its motorcycles starting at $6,695 and offers financing and insurance, as well.

Background and History

Buyers can also order limited-edition motorcycles custom-built with distinctive paint designs and accessories, to express their personality. However, Harley-Davidson selects annually only a small number of orders for custom-built bikes. Not surprisingly, these custom products are in high demand by all targeted segments, despite their higher price tags.

Growth and Flexibility

To encourage new riders to learn to safely ride a motorcycle and then perhaps buy a Harley-Davidson bike, many of the company’s dealers offer the Rider’s Edge driving course. The Rider’s Edge also helps experienced riders to hone their riding skills and learn special techniques for riding in groups.

Although competitors, such as Yamaha and Suzuki, are targeting younger motorcyclists worldwide, Harley-Davidson sees its uniquely American brand and its reputation for quality as two major strengths. Knowing that members of their target market are passionate about motorcycles, the company offers tours of its factories in Wisconsin, Pennsylvania, and Missouri. It also set up the Harley-Davidson Museum in its headquarters city of Milwaukee, with 130,000 square feet of exhibits featuring Harley-Davidson products of the past, present, and future.

On the lifestyle side, the Harley Owners Group (HOG) fosters a sense of community among customers, both young and old, male and female. HOG’s more than a million members enjoy benefits such as access to dozens of exclusive group rides, a special customer service hotline, and subscriptions to motorcycling magazines. In addition, members can use the Harley-Davidson website to plan travel, book hotels, rent bikes, or ship their bikes for their next riding adventures.

Like a number of companies, global economic woes have brought a challenge for Harley-Davidson. Sales of the most profitable models are declining, while sales of low-profit models are increasing. The company still builds and sells more than 300,000 motorcycles each year, but its ability to grow profitably depends, in large part, on the success of its targeting strategy.

According to the Motorcycle Industry Council, the average age of motorcyclists is 42. The average age of Harley-Davidson’s customers is 48, but its customers are intensely loyal to the iconic brand. If the company can bring in younger customers, especially first-time buyers, it has a good chance of keeping them as they trade up to more powerful and expensive motorcycles in the coming years.

As a result, Harley-Davidson is putting special targeting emphasis on consumers in their 20s and on women. Its newer models marry the brand’s image of freedom and individuality to motorcycles with styling, performance, and features that appeal to these two segments. To attract first-time buyers as well as experienced riders trading up to better bikes, Harley-Davidson prices its motorcycles starting at $6,695 and offers financing and insurance, as well.

Background and History

Buyers can also order limited-edition motorcycles custom-built with distinctive paint designs and accessories, to express their personality. However, Harley-Davidson selects annually only a small number of orders for custom-built bikes. Not surprisingly, these custom products are in high demand by all targeted segments, despite their higher price tags.
Introduction

More than a century after the first Harley-Davidson motorcycle hit the road, the company dominates the U.S. motorcycle market. The company weathered on the brink of bankruptcy in the 1980s and then roared back with a renewed focus on product quality. Now, with annual worldwide sales of nearly $6 billion, Harley-Davidson is building a solid foundation for future profits by focusing on younger customers and on women.

According to the Motorcycle Industry Council, the average age of motorcyclists is 42. The average age of Harley-Davidson’s customers is 48, but its customers are intensely loyal to the iconic brand. If the company can bring in younger customers, especially first-time buyers, it has a good chance of keeping them as they trade up to more powerful and expensive motorcycles in the coming years.

McDonald’s Marketing Serves Up Global and Local Profits

Introduction

More than a century after the first Harley-Davidson motorcycle hit the road, the company dominates the U.S. motorcycle market. The company weathered the brink of bankruptcy in the 1980s and then rebounded with a renewed focus on product quality. Now, with annual worldwide sales of nearly $6 billion, Harley-Davidson is building a solid foundation for future profits by focusing on younger customers and on women.

According to the Motorcycle Industry Council, the average age of motorcyclists is 42. The average age of Harley-Davidson’s customers is 48, but its customers are intensely loyal to the iconic brand. If the company can bring in younger customers, especially first-time buyers, it has a good chance of keeping them as they trade up to more powerful and expensive motorcycles in the coming years.

As a result, Harley-Davidson is putting special targeting emphasis on consumers in their 20s and on women. Its newest models marry the brand’s image of freedom and individuality to motorcycles with styling, performance, and features that appeal to these two segments. To attract first-time buyers as well as experienced riders trading up to better bikes, Harley-Davidson prices its motorcycles starting at $6,695 and offers financing and insurance, as well.

Background and History

Buyers can also order limited-edition motorcycles custom-built with distinctive paint designs and accessories, to express their personality. However, Harley-Davidson selects annually only a small number of orders for custom-built bikes. Not surprisingly, these custom products are in high demand by all targeted segments, despite their higher price tags.

Growth and Flexibility

To encourage new riders to learn to safely ride a motorcycle and then perhaps buy a Harley-Davidson bike, many of the company’s dealers offer the Rider’s Edge driving course. In the past decade, thousands of consumers have graduated and earned a motorcycle license through this course. The Rider’s Edge also helps experienced riders to hone their riding skills and learn special techniques for riding in groups.

In addition, members can use the Harley-Davidson website to plan travel, book hotels, rent bikes, or ship their bikes for their next riding adventures.

Like a number of companies, global economic woes have been a real challenge for Harley-Davidson. Sales of the most profitable models are declining, while sales of low-profit models are increasing. The company still builds and sells more than 300,000 motorcycles each year, but its ability to grow profitably depends, in large part, on the success of its targeting strategy.

According to the Motorcycle Industry Council, the average age of motorcyclists is 42. The average age of Harley-Davidson’s customers is 48, but its customers are intensely loyal to the iconic brand. If the company can bring in younger customers, especially first-time buyers, it has a good chance of keeping them as they trade up to more powerful and expensive motorcycles in the coming years.

As a result, Harley-Davidson is putting special targeting emphasis on consumers in their 20s and on women. HOG’s more than a million members enjoy benefits such as access to dozens of exclusive group rides, a special customer service hotline, and subscriptions to motorcycling magazines. In addition, members can use the Harley-Davidson website to plan travel, book hotels, rent bikes, or ship their bikes for their next riding adventures.

On the lifestyle side, the Harley Owners Group (HOG) fosters a sense of community among customers, both young and old, male and female. HOG’s more than a million members enjoy benefits such as access to dozens of exclusive group rides, a special customer service hotline, and subscriptions to motorcycling magazines. In addition, members can use the Harley-Davidson website to plan travel, book hotels, rent bikes, or ship their bikes for their next riding adventures.

In addition, members can use the Harley-Davidson website to plan travel, book hotels, rent bikes, or ship their bikes for their next riding adventures.

Background and History

Buyers can also order limited-edition motorcycles custom-built with distinctive paint designs and accessories, to express their personality. However, Harley-Davidson selects annually only a small number of orders for custom-built bikes. Not surprisingly, these custom products are in high demand by all targeted segments, despite their higher price tags.

Growth and Flexibility

To encourage new riders to learn to safely ride a motorcycle and then perhaps buy a Harley-Davidson bike, many of the company’s dealers offer the Rider’s Edge driving course. In the past decade, thousands of consumers have graduated and earned a motorcycle license through this course. The Rider’s Edge also helps experienced riders to hone their riding skills and learn special techniques for riding in groups.

Consult Your Supervisor. Knowing that members of its target market are passionate about motorcycles, the company offers tours of its factories in Wisconsin, Pennsylvania, and Missouri. It also set up the Harley-Davidson Museum in its headquarters city of Milwaukee, with 130,000 square feet of exhibits featuring Harley-Davidson products of the past, present, and future.

Talk with Human Resources. On the lifestyle side, the Harley Owners Group (HOG) fosters a sense of community among customers, both young and old, male and female. Part 2: Environmental Forces and Social and Ethical Responsibilities
Part are color coded. The items that change color are:

**Part Opener:** color block behind part number, title and intro text. Also the number in front of the chapter titles on the gray block

**Chapter Opener:** Color behind text on verso page. Bleed color on recto page

**Running Heads:** bleed boxes behind folios

**End of Chapter:** color boxes behind restated learning objectives

**End of Part Cases:** color boxes bleeding off top of pages

**Brief Contents:** color of part number, part title and page number

**Full Contents:** color bar behind part number and title. Color of chapter number, chapter title and page number
Buildings in the United States account for 39 percent of the country’s primary energy use, 70 percent of its resource consumption, 15 trillion gallons of water use. Buildings are beginning to get more attention in the fight against global warming because carbon dioxide emissions could be cut by 6 million tons a year. The equivalent of taking 1 million cars off the road—if half the nation’s new commercial buildings used 50 percent less energy.

Consider that a ten-story office building in Los Angeles could save $141,000 annually on its electricity bill and extract 40 tons of carbon from the air if it were to have a green roof and four green walls.

Marketing these new green building products requires educating customers about the new technologies available. Demonstrating that the technology works and provides benefits to both customers and society at large.

Larger companies are joining the new green building revolution such as The Gap retail chain installed a 69,000 square foot green roof on its headquarters. Ford Motor Company installed green roofs on its corporate headquarters.

Cities also encourage green building such as the cities of Chicago and Portland which have over 250 and 120 green roofs, respectively. As customers and society at large become more aware of the potential benefits and savings of these products, they are more likely to begin demanding them from contractors and builders. In this way, the welfare of customers and society will improve through value-driven marketing.

Part of the success of smaller vehicles is that they appeal to the practical and emotional sides of consumers. Fuel efficiencies are higher. The smart fortwo coupe gets 40 mpg highway, the MINI Cooper gets 37 mpg, and the IQ is Toyota’s most fuel-efficient vehicle at 54 mpg highway. The fortwo has also earned the Ultra Low Emission designation from the Air Resources Board of California, due to its low exhaust emissions. Increased parking options is another perk of the small car, especially in crowded cities where parking is a challenge. The cars also aim to...
Part 2: Environmental Forces and Social and Ethical Responsibilities

Chapter 2: Planning, Implementing, and Controlling Marketing Strategies

With environmental concerns increasing, the automobile market has seen a global decline in sales and people are looking for smarter solutions to transportation.

■ While global car sales have been declining precipitously, the MINI Cooper (made by BMW) and smart cars are two bright spots on the car industry horizon.

■ The smart car is like no other car on the American market, measuring in at around 106 inches long, it is three feet shorter than the MINI Cooper.

■ Despite its small size, test drivers have found the interior to be roomier than expected.

Over 770,000 of the original smart fortwo coupes have been sold in 36 countries since 2001 and the current smart model is doing well in the United States.

1. It is the first car that can be factory ordered over the internet.
2. Toyota’s answer to the tiny car is called the iQ, which will first launch in small-car-friendly Japan and Europe.
3. With sales expected to be 2,500 and 6,000 a month, respectively. Plans are to eventually sell the car in the U.S.

Efficiency and Size Make Tiny Cars a Winning Segment

ISSUE: Should companies partner in managing their environmental and social responsibility issues, or should they maintain independence, making this a competitive marketing strategy?

With environmental concerns increasing, the automobile market has seen a global decline in sales and people are looking for smarter solutions to transportation. One answer appears to be, go tiny. While global car sales have been declining precipitously, the MINI Cooper (made by BMW) and smart cars (smart is a member of Mercedes-Benz Cars) are two bright spots on the car industry horizon. The smart car is like no other car on the American market, measuring in at around 106 inches long, it is three feet shorter than the MINI Cooper. Despite its small size, test drivers have found the interior to be roomier than expected.

Over 770,000 of the original smart fortwo coupes have been sold in 36 countries since 2001 and the current smart model is doing well in the United States—it is the first car that can be factory ordered over the internet. Plans are to eventually sell the car in the U.S. as well.

Part of the success of smaller vehicles is that they appeal to the practical and emotional sides of consumers. Fuel efficiencies are higher. The smart fortwo coupe gets 40 mpg highway; the MINI Cooper gets 37 mpg; and the iQ is Toyota’s most fuel-efficient vehicle at 54 mpg highway. The fortwo has also earned the Ultra Low Emission designation from the Air Resources Board of California, due to its low exhaust emissions. Increased parking options is another perk of the small car, especially in crowded cities.
Entrepreneurial Marketing

Efficiency and Size Make Tiny Cars

With environmental concerns increasing, the automobile market has seen a global decline in sales and people are looking for smarter solutions to transportation. One answer appears to be, go tiny. While global car sales have been declining precipitously, the MINI Cooper (made by BMW) and smart cars (smart is a member of Mercedes-Benz Cars) are two bright spots on the car industry horizon. The smart car is like no other car on the American market, measuring in at around 106 inches long, it is three feet shorter than the MINI Cooper. Despite its small size, test drivers have found the interior to be roomier than expected.

Over 770,000 of the original smart fortwo coupes have been sold in 36 countries since 2001 and the current smart model is doing well in the United States—it is the first car that can be factory ordered over the internet. Toyota’s answer to the tiny car is called the IQ, which will first launch in small-car-friendly Japan and Europe, with sales expected to be 2,500 and 6,000 a month, respectively. Plans are to eventually sell the car in the U.S. as well.

Part of the success of smaller vehicles is that they appeal to the practical and emotional sides of consumers. Fuel efficiencies are higher. The smart fortwo coupe gets 40 mpg highway; the MINI Cooper gets 37 mpg; and the IQ is Toyota’s most fuel-efficient vehicle at 54 mpg highway. The fortwo has also earned the Ultra Low Emission designation from the Air Resources Board of California, due to its low exhaust emissions. Increased parking options is another perk of the small car, especially in crowded cities where parking is a challenge. The cars also aim to be more affordable than their large counterparts with the Smart priced from $11,590 to $16,590; the IQ is set to sell for $13,720, and the MINI Cooper at the highest end at $18-20,000. Buying tiny may very well display a high level of intelligence.
Will any part of your Thanksgiving feast be grilled, smoked, or fried?

- Likely 61.7%
- Unlikely 35.7%
